Location: Benin City, Nigeria

Summary

A self-driven freelance Python developer passionate about solving real-world problems through code. Skilled in automation, scripting, and creating functional tools using Python and web technologies. Currently building smart tech projects and offering remote freelance services.

Skills

Python, HTML/CSS, Git & GitHub, Raspberry Pi, Web Automation, ReportLab, Problem Solving, Electronics Prototyping

Projects

Automated Invoice Generator

Developed a Python script using pandas and ReportLab to automatically generate client invoices in PDF format. Used this tool in freelancing work to streamline billing and enhance client communication.

Freelance Python Projects

Worked with individuals and small businesses to build custom scripts, automations, and simple web solutions. Projects included data extractors, file converters, and interactive web pages.

Yegwa Samuel

Python Developer & Freelancer

Smart Glasses Prototype

A Raspberry Pi-powered wearable that integrates object recognition and voice assistant control. Inspired by EDITH from Spider-Man and built for personal innovation.

Mini Earpod Charging Module

Designed a custom charging module for a single earpod using direct contact points. Useful in repairs, tech recycling, and DIY gadget projects.

Education

Self-Taught Developer with hands-on experience in real-world projects and online learning platforms.
